In this tables the variables are stored, which the program modules use to function with variable factors or values.

The parameter groups are:
a. System values. Functional parameters.
b. Payroll. Hourly tariffs, deductions of wages and paying periods
c. Financial. Charging values for taxes payments , increments on stock, works and so on.
d. Services. Charging values for large equipment
e. Graphs. Parameters for scaling and colors graphs of external works.

a. Parameters for order numbers and even-odd year determination for stock puposes.
   The parameter annual consumption)is for change even year in odd year, or
    reverse, so it's executed only one time.

b. Variables for payroll administration.
   Table Wages:
   This are the tax deduction rates with it's upper and lower limits, to charge the payments.
    Also the employer part of the deductions is determined.
   This rules are established by the government.
   Furthermore the pension premium employee and employer is stored.
    Table Hours:
    The hourly wages of the employees are stored in table lonen.
    With the table lonen and this parameters the wages are determined.
    Table Periods:
    These are the monthly periods for payments wages employees. Format yyyy-mm
    With the field working_period the working hours for that month are filled in, taking into account
     weekend and public holidays.
    With setting the lock the period is blocked for executing, when it's already executed.
    In this case only printing or lookup is possible.

c. Table financial.
   VAT taxes as stated by the government
   The profit parameter is determined by the company and is dependent on competitors in the
   market the rates are low, middle and high profits.
   Stock raises are costs on products by handling, storage costs, interest loss and obsolete
   products
   Stock raises by external works are for transportation and storage on the work.
   Order costs are delivering costs for online orders and administration and handling costs for other
   items.

d. Services

e. Graphs
   The parameters forecast profit (begrote winst) and forecast turn-over (begrote omzet) are used
   for financial graphs.
   The parameters scaling is for de scaling, colors for line colors of the graphs.

Table accounts:
Access control for employees to certain menus and menu lines.
For detailed description see Accounts_and_access_control

Access external partners to ERP Pandora.

With this menu line the employees off suppliers or client companies gets access to the **ERP** system.
Only lookups are possible for their own company.

Calculating working rates:
With this menu item the rates towards the works are recalculated, for instance then wages has been
raised or overhead has changed (rate factor – tarieffactor Dutch).
